EDUCATION

Vellore Institute of Technology

Oct 2022 – Present

Integrated M.Tech – Computer Science and Engineering (Computational Data Science) CGPA: 8.07 / 10.0

TECHNICAL SKILLS

Core Expertise: Data Analytics · ETL Pipelines · Business Intelligence · Data Automation · ML & Deep Learning

Languages: Python · SQL · Java · DAX

Libraries & Frameworks: Pandas · NumPy · Scikit-learn · TensorFlow · Keras · Matplotlib · Seaborn · OpenPyXL

BI & ETL Tools: Power BI · Tableau · Apache Airflow · Talend (basics) · Advanced Excel (Pivot Tables, VLOOKUP, Power Query, Macros)

Developer Tools: Git · GitHub · Jupyter Notebook · JupyterLab · VS Code · Google Colab

CERTIFICATIONS

Applied Machine Learning in Python University of Michigan via Coursera

Google Data Analytics Professional Certificate Google via Coursera

Oracle Cloud Infrastructure Artificial Intelligence Oracle via Oracle Learning

EXPERIENCE

CogniSys AI Private Limited

Oct 2025 – Dec 2025

Data Analytics & ML Intern Hyderabad, Telangana

- Designed and maintained ETL pipelines to ingest, clean, and transform structured and unstructured datasets, improving downstream data quality for analytics workflows.
- Built interactive Power BI dashboards to visualize key business metrics, enabling data-driven decision-making for internal stakeholders.

PROJECTS

Financial Data ETL Pipeline & Sentiment Dashboard Python, PRAW, VADER, TF-IDF, LSTM, Power BI, SQL

- Built an end-to-end ETL pipeline to extract financial discussion data from Reddit using the Reddit API (PRAW), applying data cleaning and transformation before loading into a structured SQL database.
- Applied VADER sentiment analysis and TF-IDF vectorization to derive investor sentiment scores, enabling quantitative analysis of market mood across thousands of posts.
- Designed and deployed a Power BI dashboard visualizing sentiment trends, keyword frequency, and stock mention volumes – providing actionable BI insights for financial analytics.
- Implemented data validation and error handling mechanisms to ensure pipeline robustness and reliability.
- Optimized SQL queries and data storage for efficient retrieval and faster dashboard performance.

Automated Misinformation Detection & Reporting System Python, Scikit-learn, Pandas, TF-IDF, OpenPyXL

- Developed an automated classification pipeline using a Passive Aggressive Classifier with TF-IDF Vectorization to detect fake news articles with high precision (95%+ accuracy).
- Engineered a complete data preprocessing workflow using Pandas – handling missing values, text normalization, and feature engineering from raw news datasets.
- Automated result reporting by exporting classification outputs and performance metrics (Precision, Recall, F1-Score) to formatted Excel workbooks using OpenPyXL, simulating a real-world BI reporting cycle.
- Performed model evaluation and tuning to improve classification performance and reduce false positives.
- Integrated the pipeline into a reusable workflow for scalable deployment on new datasets.

Customer Behaviour Analytics & Recommendation Engine Python, Pandas, Scikit-learn, Collaborative Filtering

- Developed a Collaborative Filtering-based recommendation engine to analyze user-item interaction patterns and personalize recommendations at scale.
- Performed advanced data wrangling using Python and Pandas – cleaning, normalizing, and transforming raw interaction logs into model-ready datasets.
- Achieved 90%+ prediction accuracy, evaluated using MSE and RMSE across train/test splits with rigorous cross-validation.
- Improved recommendation quality by optimizing similarity metrics and filtering techniques.
- Conducted exploratory data analysis (EDA) to uncover user behavior patterns and trends.
